(54) ELECTRONIC APPARATUS

(57)Abstract:

PROBLEM TO BE SOLVED: To make it possible to rapidly display desired character groups by making the position of a cursor immobile in the state before a change when the display contents of a display section are changed at the time of moving the cursor.

SOLUTION: This electronic apparatus has the display section 1, an input section 2 and a control section 3 and has an input function. The position of the cursor is made immobile when the display contents of the display section 1 are changed to the previous line or to the later line. Namely, if the cursor is moved further from the position of the top character 'Ka' (the Japanese syllabary) to the left side when the currently displayed character group is 'KA line', the character group 'A line' of the previous line is displayed. The position of the cursor is not changed and the cursor exists on the top character 'A'. If the cursor is operated to be moved further to the right side from the position of a terminal display 'Ko' when the currently displayed character group is the 'Ka line', the character group 'Sa line' of the later line is displayed and the cursor exists on the tail character 'So' without changing its position.
